Near-hole inflow during finest-resolution visits — positive inward
Coordinate spheres outside excision; no flux inferred during frozen intervals
Hole at x=-16 M; sphere r=2 M
Hole at x=16 M; sphere r=2 M
Visit 0
Visit 1
$\dot{M}/\dot{M}_{\mathrm{Bondi,\,total}}$
Time since finest-zone entry [M]
Matched phases 10, 20, 30, 40 M
Insufficient phase coverage yet
Mean flux / total Bondi rate
Finest-zone visit
Change between sampled visits
Flux change [%]
